## 1. Planned Readmission Algorithm Overview

Readmission measures are intended to capture unplanned readmissions that arise from acute clinical events requiring urgent re-hospitalization within 30 days of discharge. Generally, planned readmissions are not a signal of quality of care. Therefore, the Centers for Medicare & Medicaid Services (CMS) have worked with experts in the medical community as well as other stakeholders to identify planned readmissions for procedures and treatments and not count them in readmission measures. Specifically, CMS contracted with Yale New Haven Health Services Corporation – Center for Outcomes Research and Evaluation (YNHHSC/CORE) to develop a “planned readmission algorithm” that can be used to identify planned readmissions across its readmission measures, and has applied the algorithm to each of its readmission measures. The algorithm is a set of criteria for classifying readmissions as planned or unplanned using Medicare claims. The algorithm identifies admissions that are typically planned and may occur within 30 days of discharge from the hospital.

We based the planned readmission algorithm on three principles:

1. A few specific, limited types of care are always considered planned (obstetrical delivery, transplant surgery, maintenance chemotherapy/radiotherapy/immunotherapy, rehabilitation);
2. Otherwise, a planned readmission is defined as a non-acute readmission for a scheduled procedure; and
3. Admissions for acute illness or for complications of care are never planned.

As detailed in the next section, we have operationalized the planned readmission algorithm using a flow chart and four tables of procedures and conditions (Tables PR1-PR4). A single flow chart depicts the process followed for all measures ([Figure PR1](#)). The tables are structured the same across all measures but the specific procedure and conditions they contain vary for certain measures. For all measures, Table PR1 identifies procedures that, if present in a readmission, classify the readmission as planned. Table PR2 identifies primary discharge diagnoses that classify readmissions as planned. Table PR3 identifies procedures that, if present, classify a readmission as planned as long as that readmission does not have an acute (unplanned) primary discharge diagnosis. Table PR4 lists the acute (unplanned) primary discharge diagnoses that disqualify readmissions with a potentially planned procedure in Table PR3 as planned. The details of the *index* admission (diagnosis or procedures) are not considered when determining whether a readmission is planned.

YNHHSC/CORE worked with CMS to develop the algorithm based on a hospital-wide (not condition-specific) cohort of patients. We began the development by using the Agency for Healthcare Research and Quality’s (AHRQ’s) [Clinical Classification Software \(CCS\)](#) codes to group thousands of individual procedure and diagnosis International Statistical Classification of Disease, Ninth Revision, Clinical Modification (ICD-9-CM) codes into clinically coherent, mutually exclusive procedure CCS categories and mutually exclusive diagnosis CCS categories, respectively. Clinicians then reviewed the procedure categories and identified those that are commonly planned and require inpatient admission. Clinicians

also reviewed the diagnosis categories and identified acute diagnoses unlikely to accompany elective procedures.

The algorithm underwent several rounds of review by stakeholders. YNHSC/CORE initially posted Version 1.0 of the algorithm for public comment during the measurement development process. The National Quality Forum (NQF) reviewed and made the algorithm available for public comment during its endorsement review of the Hospital-Wide All-Cause Unplanned Readmission Measure (NQF #1789). We also recruited 27 surgical subspecialists nominated by their specialty societies to review the algorithm and suggest refinements. In addition, hospitals participating in CMS's September 2012 dry run (confidential reporting) of the hospital-wide readmission measure commented on Version 1.0 of the algorithm. Version 2.1 of the planned readmission algorithm incorporates this extensive input.

CMS has modified its hospital-wide, condition-specific, and procedure-specific readmission measures to incorporate Version 2.1 of the algorithm. The algorithm uses a more comprehensive definition of planned readmissions than the definition that was originally used in the development of CMS's readmission measures. During development of the acute myocardial infarction (AMI), heart failure (HF) and pneumonia measures, for example, CMS only identified as planned those procedures and conditions which were considered follow-up care for the specific condition that was the focus of the measure. In addition, the initial version used in the hospital-wide readmission measure identified fewer procedures as potentially planned.

In applying the algorithm to condition- and procedure-specific readmission measures, teams of clinical experts reviewed the list of potentially planned procedures ([Table PR3](#)) and acute conditions that disqualify readmissions as planned ([Table PR4](#)) in the context of each measure-specific patient cohort. Where clinically indicated, we adapted the content of the tables to better reflect the likely clinical experience of each measure's patient cohort. For example, for the total hip arthroplasty (THA) and total knee arthroplasty (TKA) readmission measure, CMS removed diagnostic cardiac catheterization from the potentially planned procedure list ([Table PR3](#)) because patients in the THA/TKA measure are well enough to undergo elective surgery and would not be expected to need an elective catheterization within 30 days of discharge.

Most measures use the algorithm tables developed for a hospital-wide group of patients, referred to in this report as the *Planned Readmission Algorithm Version 2.1 - General Population*, without modification, because the algorithm fit patients admitted for these medical conditions well without revision. CMS uses the General Population algorithm tables in its AMI, HF, pneumonia, chronic obstructive pulmonary disease (COPD), and hospital-wide readmission measures. CMS has created measure specific versions of the algorithm tables for its THA/TKA and stroke readmission measures. CMS describes the basis for the changes in the technical reports for these measures.

[Section 2](#) of this report describes the *Planned Readmission Algorithm Version 2.1 - General Population* in detail. [Section 3](#) provides the algorithm flowchart (Figure PR1), and provides three sets of algorithm

tables PR1-PR4 for the General Population, the THA/TKA population, and the stroke population. ***Each set of tables should only be applied to the measures specified in their labels.***

In summary, CMS has developed a planned readmission algorithm for a general population of patients, *Planned Readmission Algorithm Version 2.1 - General Population*. The algorithm uses the process depicted in the flowchart and four tables to identify planned readmissions. CMS is using the algorithm without modification for most of its measures, including the AMI, HF, pneumonia, COPD, and hospital-wide readmission measures. It has adapted the tables used in the algorithm for its THA/TKA and stroke readmission measures.

## 2. Detailed Description of Planned Readmission Algorithm Version 2.1 - General Population

The General Population algorithm uses the flow chart ([Figure PR1](#)) and the versions of Tables PR1-PR4 designed for the general population to identify specific procedure categories and discharge diagnosis categories to classify readmissions as planned. As illustrated in the flow chart ([Figure PR1](#)), readmissions that include certain procedures ([Table PR1](#)) or are for certain diagnoses ([Table PR2](#)) are always considered planned. If the readmission does not include a procedure or diagnosis in [Table PR1](#) or [Table PR2](#) that is always considered planned, the algorithm checks whether the readmission has at least one procedure that is considered potentially planned ([Table PR3](#)). If the readmission has no procedures from [Table PR3](#), the readmission is considered unplanned. [Table PR3](#) includes 57 AHRQ procedure CCS categories from among 231 AHRQ procedure CCS categories and 11 individual ICD-9-CM procedure codes. Examples of potentially planned procedures are total hip replacement (Procedure CCS 153) and hernia repair (Procedure CCS 85). *The analogous tables for the THA/TKA and stroke measures can be found in [section 3](#) of this document.*

If the readmission has at least one potentially planned procedure from [Table PR3](#), the algorithm checks for a primary discharge diagnosis that is considered acute ([Table PR4](#)). If the readmission has an acute primary discharge diagnosis from [Table PR4](#), the readmission is considered unplanned. Otherwise, it is considered planned. The list of acute primary discharge diagnoses includes 100 diagnosis groups from among 285 AHRQ condition categories and 4 groupings of individual ICD-9-CM diagnosis codes that represent cardiac diagnoses that would not be associated with a planned readmission. Examples of acute primary discharge diagnoses that identify readmissions with potentially planned procedures as unplanned are pneumonia (Diagnosis CCS 122) and cardiac arrest (Diagnosis CCS 107).

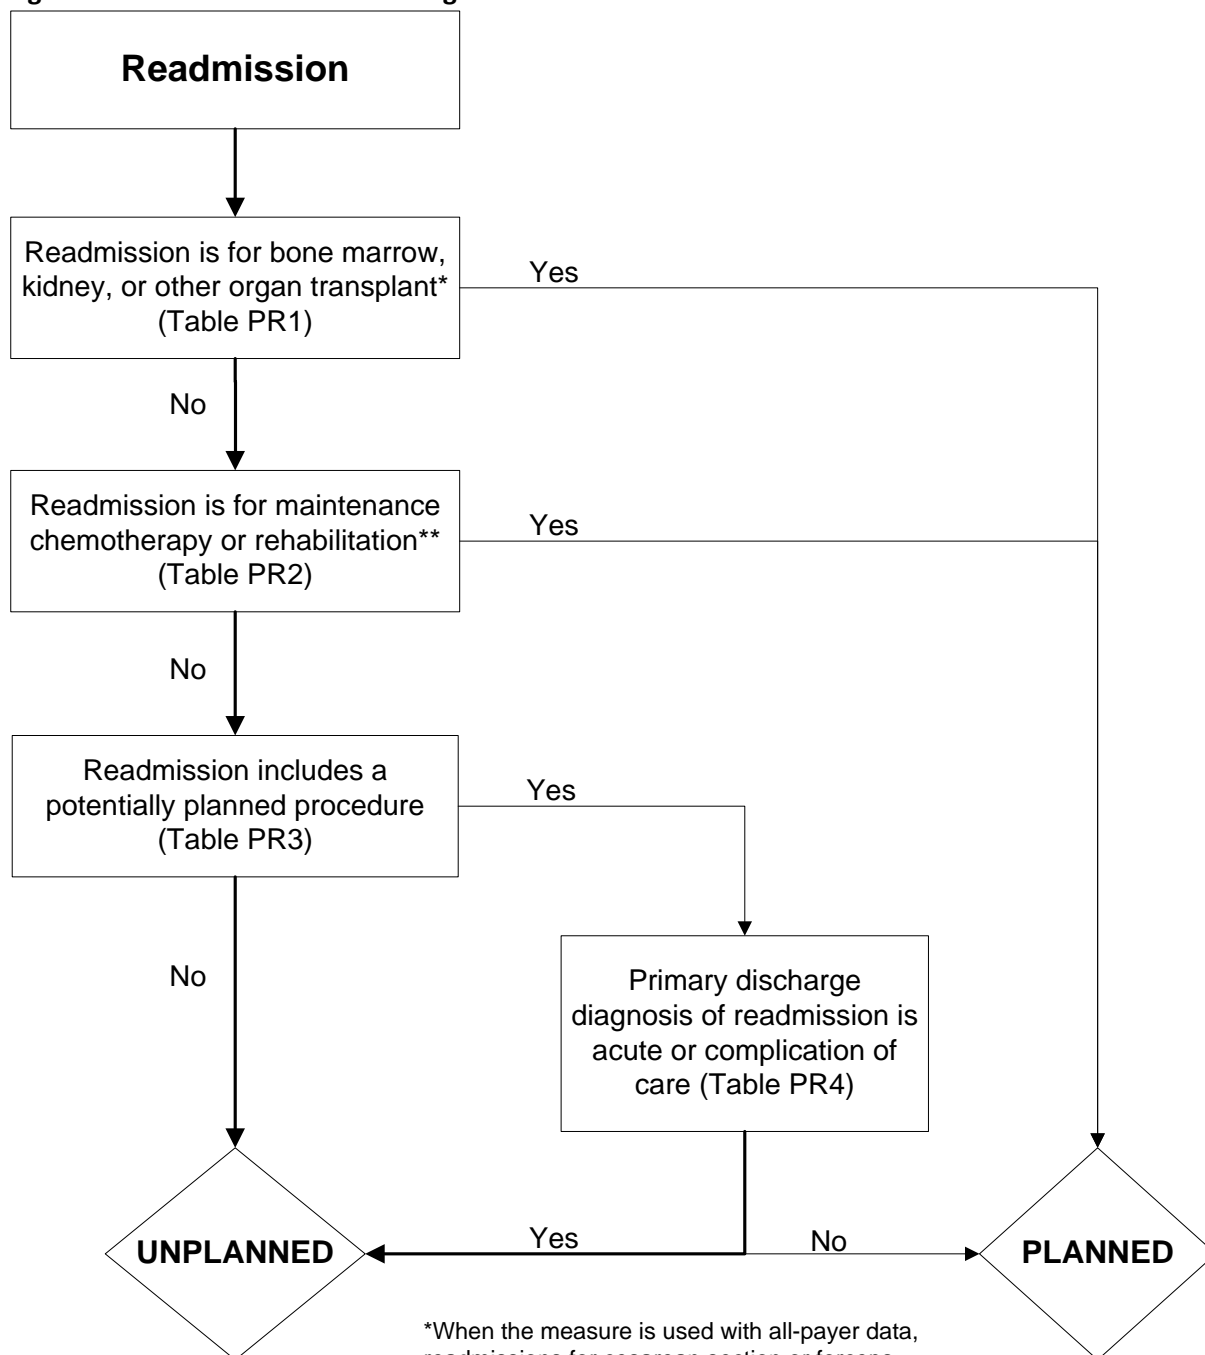

[Table 1](#) shows the ten most common procedures the algorithm identifies as planned readmissions among Medicare fee-for-service patients. We applied the *Planned Readmission Algorithm Version 2.1 - General Population* to the 7.7 million Medicare fee-for-service admissions for patients aged 65 and older who were eligible for CMS's hospital-wide readmission measure in 2010. From these 7.7 million admissions, there were 111,192 planned readmissions. Some planned readmissions had multiple planned procedures that qualified the readmission as planned. Thus, for these 111,192 planned readmissions there were 153,663 procedure or diagnosis CCSs that qualified the readmissions as planned.

**Table PR4: Acute Diagnosis Categories (Version 2.1 – THA/TKA Population)**

Diagnosis CCS	Description
1	Tuberculosis
2	Septicemia (except in labor)
3	Bacterial infection; unspecified site
4	Mycoses
5	HIV infection
7	Viral infection
8	Other infections; including parasitic
9	Sexually transmitted infections (not HIV or hepatitis)
54	Gout and other crystal arthropathies
55	Fluid and electrolyte disorders
60	Acute posthemorrhagic anemia
61	Sickle cell anemia
63	Diseases of white blood cells
76	Meningitis (except that caused by tuberculosis or sexually transmitted disease)
77	Encephalitis (except that caused by tuberculosis or sexually transmitted disease)
78	Other CNS infection and poliomyelitis
82	Paralysis
83	Epilepsy; convulsions
84	Headache; including migraine
85	Coma; stupor; and brain damage
87	Retinal detachments; defects; vascular occlusion; and retinopathy
89	Blindness and vision defects
90	Inflammation; infection of eye (except that caused by tuberculosis or sexually transmitted disease)
91	Other eye disorders
92	Otitis media and related conditions
93	Conditions associated with dizziness or vertigo
100	Acute myocardial infarction (with the exception of ICD-9 codes 410.x2)
102	Nonspecific chest pain
104	Other and ill-defined heart disease
107	Cardiac arrest and ventricular fibrillation
109	Acute cerebrovascular disease
112	Transient cerebral ischemia
116	Aortic and peripheral arterial embolism or thrombosis
118	Phlebitis; thrombophlebitis and thromboembolism
120	Hemorrhoids
122	Pneumonia (except that caused by TB or sexually transmitted disease)
123	Influenza
124	Acute and chronic tonsillitis
125	Acute bronchitis
126	Other upper respiratory infections

Diagnosis CCS	Description
127	Chronic obstructive pulmonary disease and bronchiectasis
128	Asthma
129	Aspiration pneumonitis; food/vomitus
130	Pleurisy; pneumothorax; pulmonary collapse
131	Respiratory failure; insufficiency; arrest (adult)
135	Intestinal infection
137	Diseases of mouth; excluding dental
139	Gastroduodenal ulcer (except hemorrhage)
140	Gastritis and duodenitis
142	Appendicitis and other appendiceal conditions
145	Intestinal obstruction without hernia
146	Diverticulosis and diverticulitis
148	Peritonitis and intestinal abscess
153	Gastrointestinal hemorrhage
154	Noninfectious gastroenteritis
157	Acute and unspecified renal failure
159	Urinary tract infections
165	Inflammatory conditions of male genital organs
168	Inflammatory diseases of female pelvic organs
172	Ovarian cyst
197	Skin and subcutaneous tissue infections
198	Other inflammatory condition of skin
201	Infective arthritis and osteomyelitis
204	Other non-traumatic joint injuries
207	Pathological Fractures
225	Joint disorders and dislocations; trauma-related
226	Fracture of neck of femur (hip)
227	Spinal cord injury
228	Skull and face fractures
229	Fracture of upper limb
230	Fracture of lower limb
231	Other Fractures
232	Sprains and strains
233	Intracranial injury
234	Crushing injury or internal injury
235	Open wounds of head; neck; and trunk
236	Open wounds of extremities
237	Complication of device; implant or graft
238	Complications of surgical procedures or medical care
239	Superficial injury; contusion
240	Burns

Diagnosis CCS	Description
241	Poisoning by psychotropic agents
242	Poisoning by other medications and drugs
243	Poisoning by nonmedicinal substances
244	Other injuries and conditions due to external causes
245	Syncope
246	Fever of unknown origin
247	Lymphadenitis
249	Shock
250	Nausea and vomiting
251	Abdominal pain
252	Malaise and fatigue
253	Allergic reactions
259	Residual codes; unclassified
650	Adjustment disorders
651	Anxiety disorders
652	Attention-deficit, conduct, and disruptive behavior disorders
653	Delirium, dementia, and amnestic and other cognitive disorders
656	Impulse control disorders, NEC
658	Personality disorders
660	Alcohol-related disorders

**Table PR3: Potentially Planned Procedure Categories (Version 2.1 – Stroke Population)**

Procedure CCS	Description
3	Laminectomy; excision intervertebral disc
5	Insertion of catheter or spinal stimulator and injection into spinal
9	Other OR therapeutic nervous system procedures
10	Thyroidectomy; partial or complete
12	Other therapeutic endocrine procedures
33	Other OR therapeutic procedures on nose; mouth and pharynx
36	Lobectomy or pneumonectomy
38	Other diagnostic procedures on lung and bronchus
40	Other diagnostic procedures of respiratory tract and mediastinum
43	Heart valve procedures
44	Coronary artery bypass graft (CABG)
45	Percutaneous transluminal coronary angioplasty (PTCA)
47	Diagnostic cardiac catheterization; coronary arteriography
48	Insertion; revision; replacement; removal of cardiac pacemaker or cardioverter/defibrillator
49	Other OR heart procedures
51	Endarterectomy; vessel of head and neck
52	Aortic resection; replacement or anastomosis
53	Varicose vein stripping; lower limb
55	Peripheral vascular bypass
56	Other vascular bypass and shunt; not heart
59	Other OR procedures on vessels of head and neck
62	Other diagnostic cardiovascular procedures
66	Procedures on spleen
67	Other therapeutic procedures; hemic and lymphatic system
74	Gastrectomy; partial and total
78	Colorectal resection
79	Local excision of large intestine lesion (not endoscopic)
84	Cholecystectomy and common duct exploration
85	Inguinal and femoral hernia repair
86	Other hernia repair
99	Other OR gastrointestinal therapeutic procedures
104	Nephrectomy; partial or complete
106	Genitourinary incontinence procedures
107	Extracorporeal lithotripsy; urinary
109	Procedures on the urethra
112	Other OR therapeutic procedures of urinary tract
113	Transurethral resection of prostate (TURP)
114	Open prostatectomy
119	Oophorectomy; unilateral and bilateral
120	Other operations on ovary

Procedure CCS	Description
124	Hysterectomy; abdominal and vaginal
129	Repair of cystocele and rectocele; obliteration of vaginal vault
132	Other OR therapeutic procedures; female organs
142	Partial excision bone
152	Arthroplasty knee
