After a wet September, October proved to be drier a month, with many locations seeing rainfall deficits of around 2 inches for the month. Despite this, drought conditions held steady through the month of October with much of the region experiencing drought conditions of Severe (D2) or less. A swath of Extreme (D3) drought conditions remained draped across western Hidalgo, eastern, the southeast corner of Jim Hogg and the far SW corner of Brooks counties. Exceptional (D4) drought conditions were confined to a small area in far SW Hidalgo County and far SE Starr County.
