

## March 9th to March 10th, 2013 Severe Weather Event

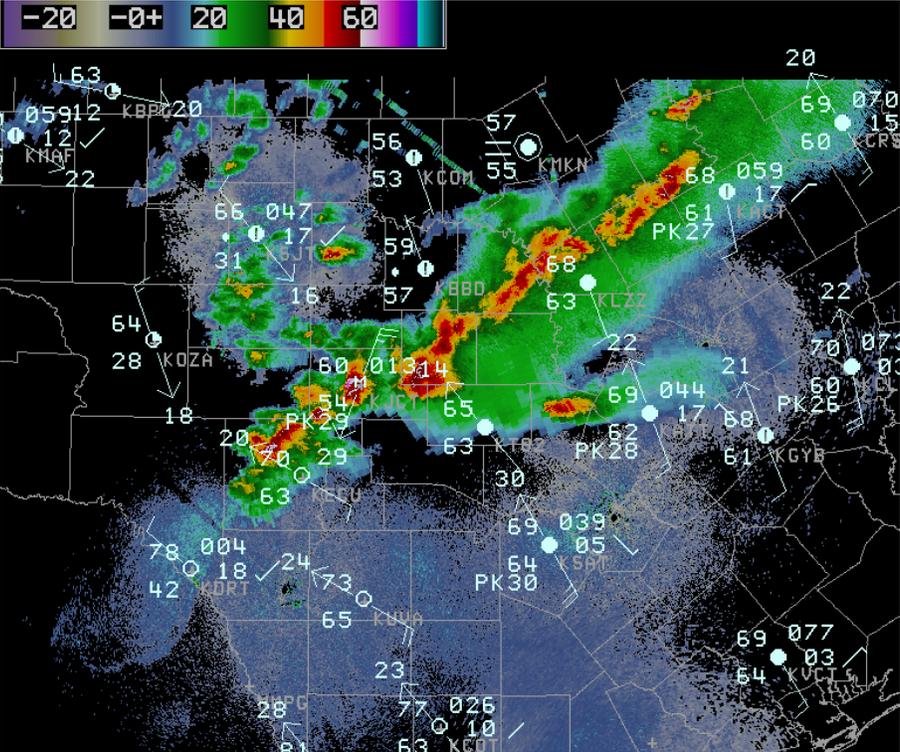

A fast moving Mid to High Level Low moved out of the Central Rockies to the Central Plains on Saturday, March 9th, leaving a larger scale Mid to High Level Trough over Northern Mexico and the Southwest U.S. The left front quadrant of the jet stream moved into Central Texas, creating more unstable environmental conditions above the surface to the top of the Troposphere in the afternoon and evening. Afternoon heating over the Edwards Plateau and Rio Grande Plains weakened the capping inversion and allowed isolated thunderstorms early Saturday evening to form over the Edwards Plateau. As the dry line moved eastward from the Edwards Plateau in the evening, this formed a broken line of thunderstorms over the Edwards Plateau and Western Hill Country to near Highway 90. The broken line of thunderstorms moved east across South Central Texas Saturday night to early Sunday morning March 10th. The storms arrived at the I35 corridor around Midnight to 2 AM. Large hail accompanied the stronger thunderstorms, with the size of the hail varying from pea size to 1.75 inches. Preliminary local storm reports from March 9th to 10th at the end of this summary show the size of the hail. The thunderstorms produced wind gusts to near 35 to 50 mph. As the storms moved to the east part of South Central Texas after 3 AM, the cap strengthened, creating more stable conditions and causing decreasing coverage of thunderstorms.

A 500 HPA chart of the disturbance at 10 PM Saturday Night March 9th, 2013 is shown below.

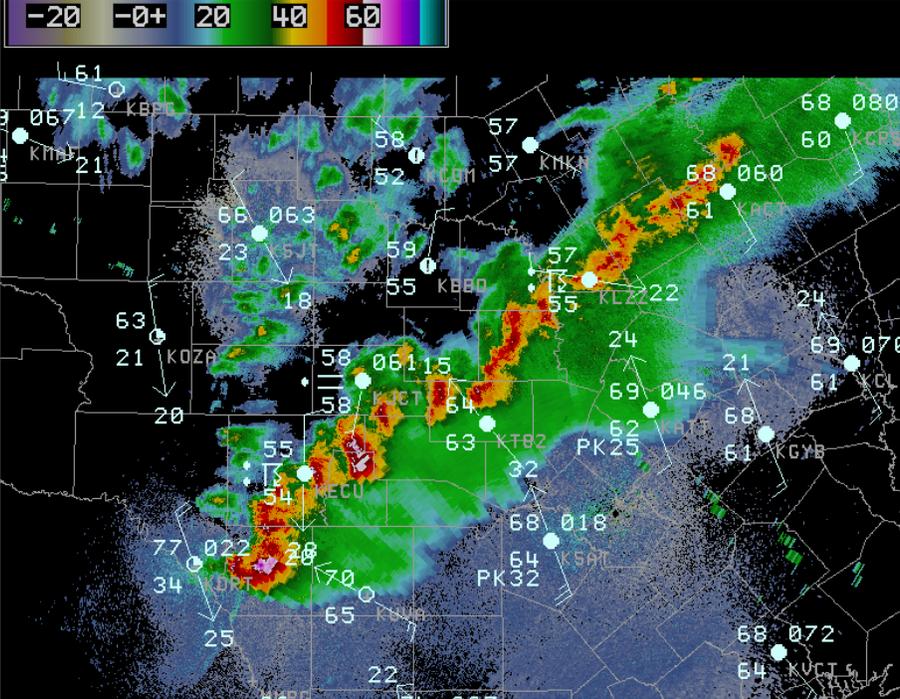

Radar Pictures of the Event from 10 PM CST March 9th to 6 AM CDT March 10th follow.

March 9th at 10 PM CST

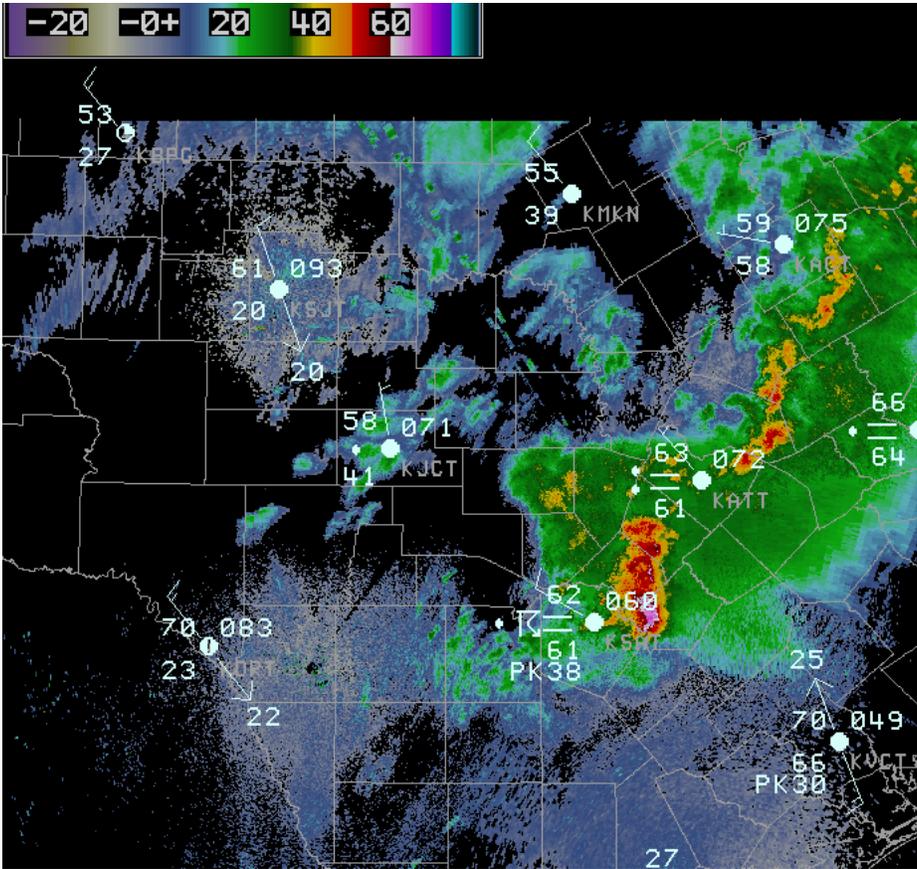

March 9th at 11 PM CST

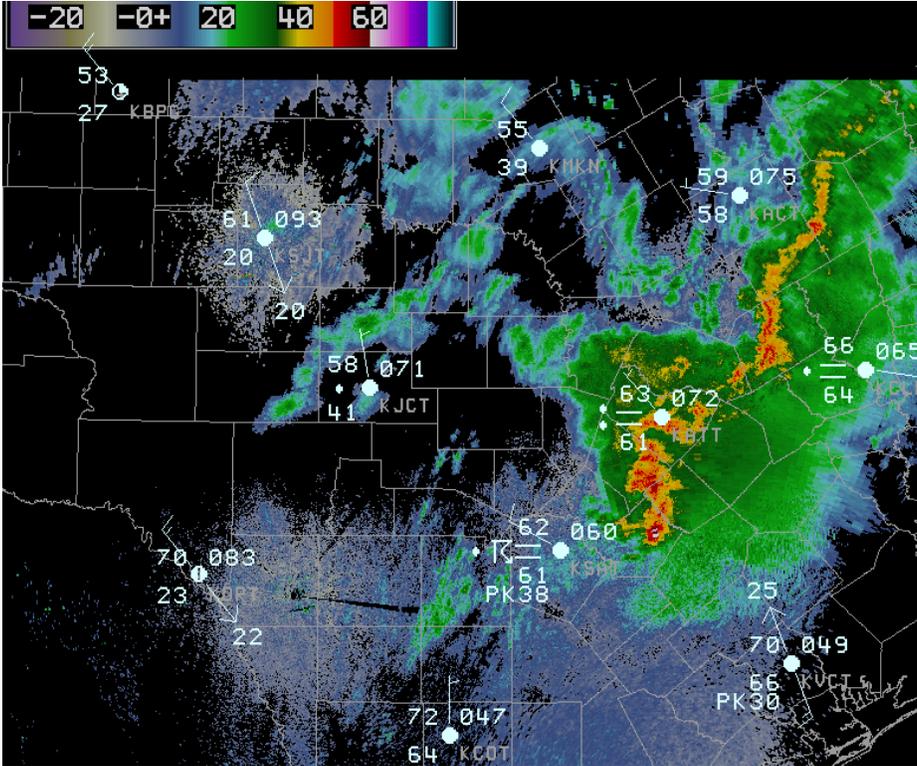

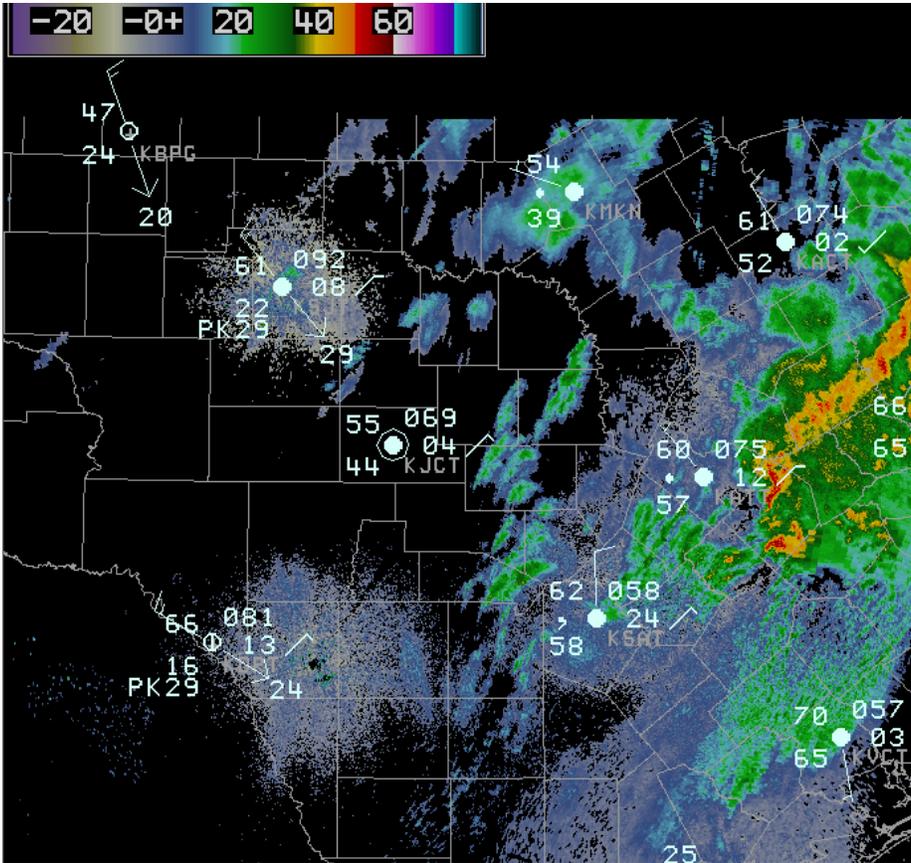

March 10th at 130 AM CST

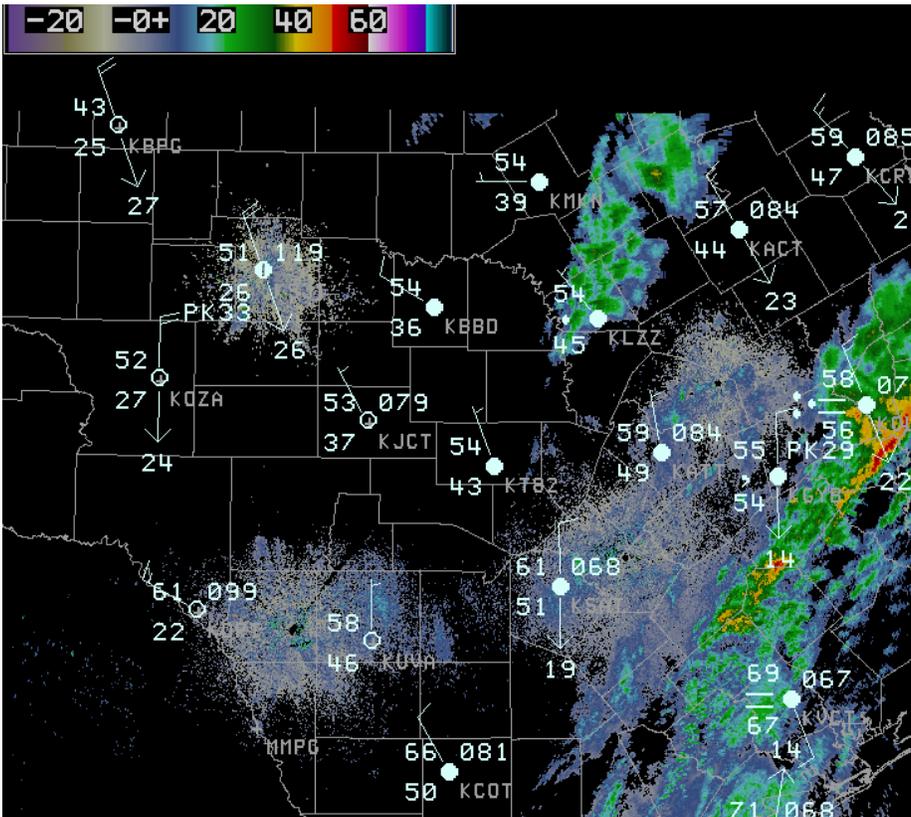

March 10th at 300 AM CDT (Central Standard Time Changed to Central Daylight Time)

March 10th 400 AM CDT

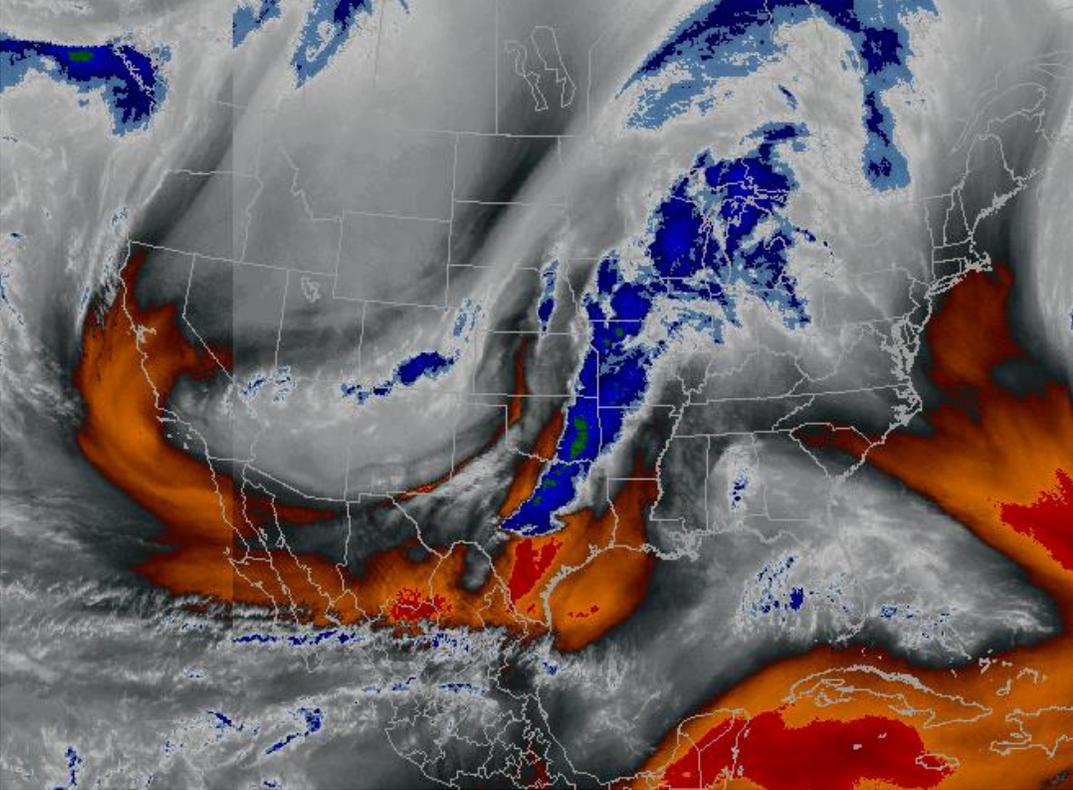

March 10th 600 AM CDT

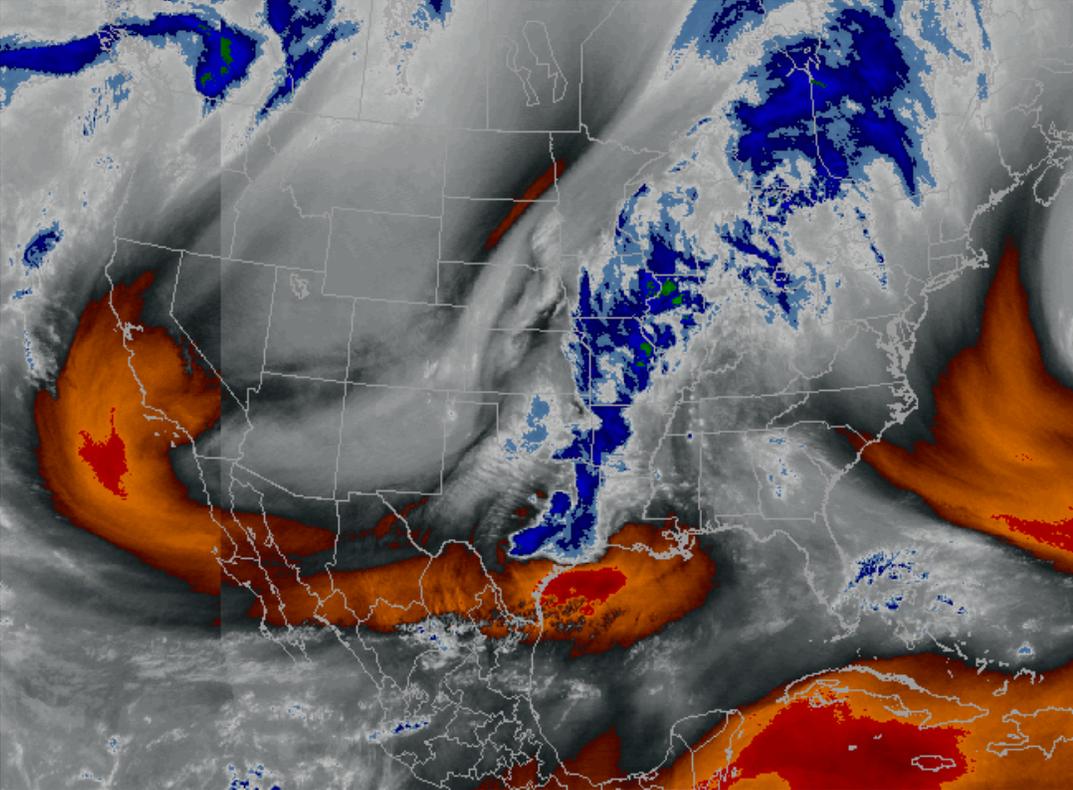

Several Water Vapor Satellite Pictures of the Event from 901 PM CST March 9th to 601 AM CDT March 10th follow.

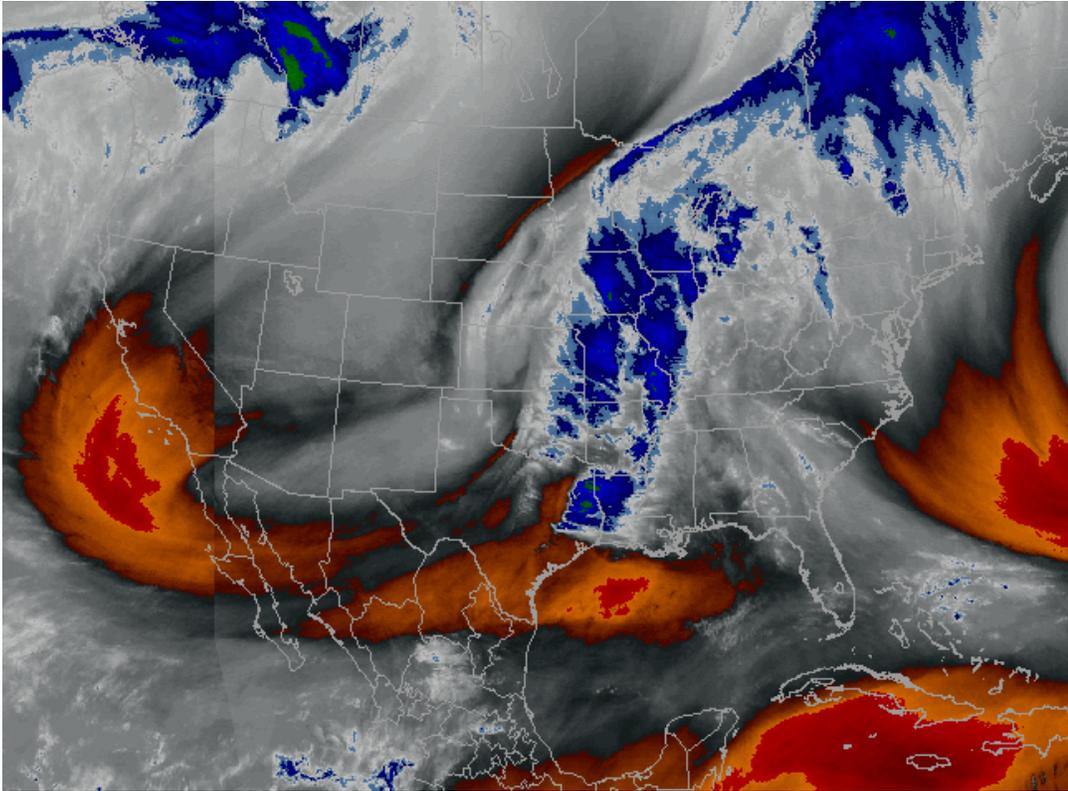

901 PM CST March 9th

101 AM CST March 10th

601 AM CDT March 10th

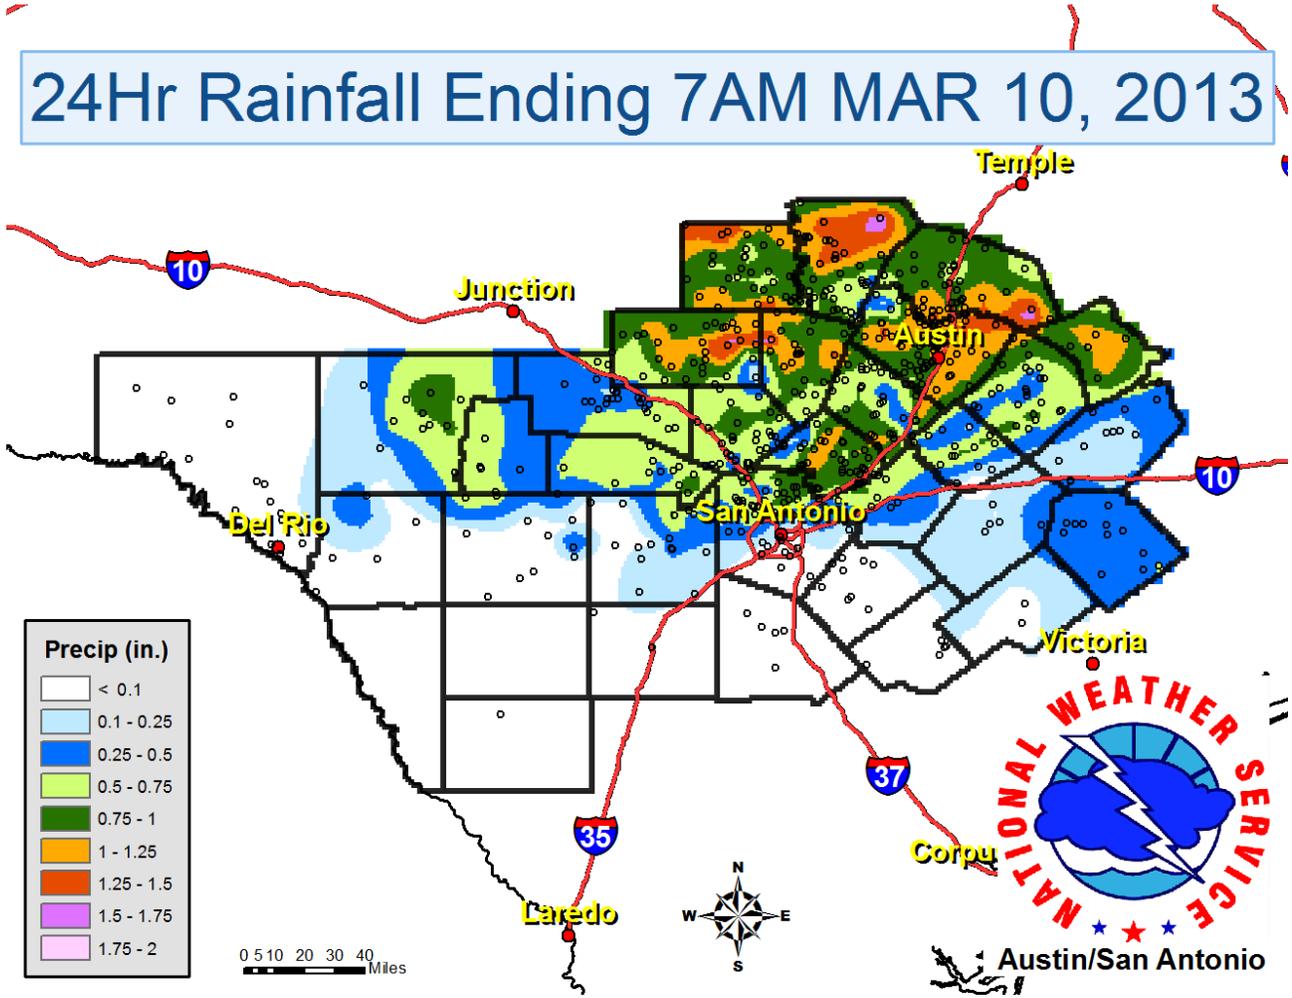

Rainfall amounts across South Central Texas varied from little or no rain over the south to southwest part of the area to steadily increasing rainfall amounts over the Hill Country to adjacent parts of Central Texas. Rainfall amounts across the Hill Country and South Central Texas are listed below. These rainfall amounts come from Cocorahs rainfall reports and from local airport reporting sites.
