

## March 19th to 20th, 2013 Severe Weather Summary

A strong and fast moving disturbance moved toward South Central Texas from West Texas and Eastern New Mexico, bringing more unstable conditions in the late afternoon and evening on Monday, March 19th, 2013. A front retreated to the north, as a weak warm front during the day, in advance of the strong disturbance. As the strong disturbance moved out of West Texas to Central Texas in the evening and night time hours, the front moved south across South Central Texas as a cold front. More unstable conditions developed from the disturbance and the surface cold front, providing excellent conditions for thunderstorms to develop. Some of the thunderstorms were severe with large hail and damaging winds. The hail size varied from 0.25 to 2 inches. The largest hail size was 2 inches at Lexington in Lee County at 1220 AM CDT March 20th. The strongest wind gust was 67 mph at the Burnet Airport at 157 AM CDT March 20, 2013. There was an estimated wind gust near 60 mph at 235 AM CDT, 2 miles NNW of Cedar Park in Williamson County, and another estimated wind gust of 55 mph at 530 AM CDT, 7 miles SSE of Carrizo Springs. As the disturbance moved east, the thunderstorms decreased from after 530 AM to 700 AM. Drier weather came during the daytime hours on Wednesday, March 20th, with afternoon highs mostly in the 70s. Spring of 2013 began on March 20th at 602 AM CDT.
