

April 12th – April 19th Severe Weather

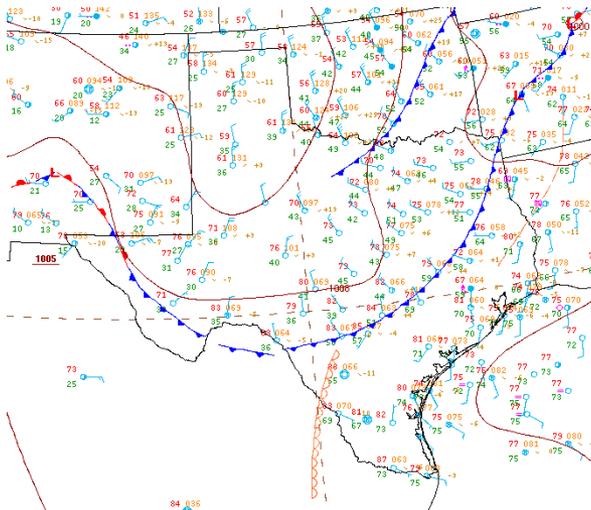

Austin - San Antonio Weather Forecast Office

Synoptic Set Up - Synopsis

Low Pressure over 4-Corners on 4/17/15

Weak Front Moving Through 4/19/15

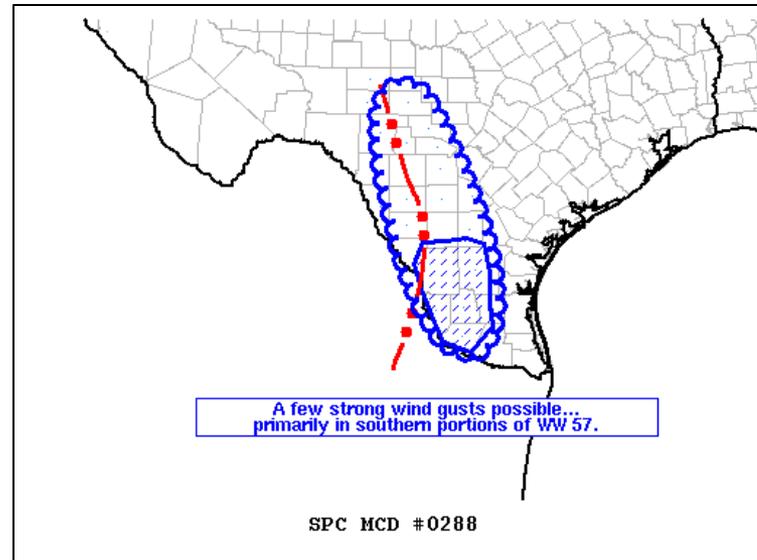

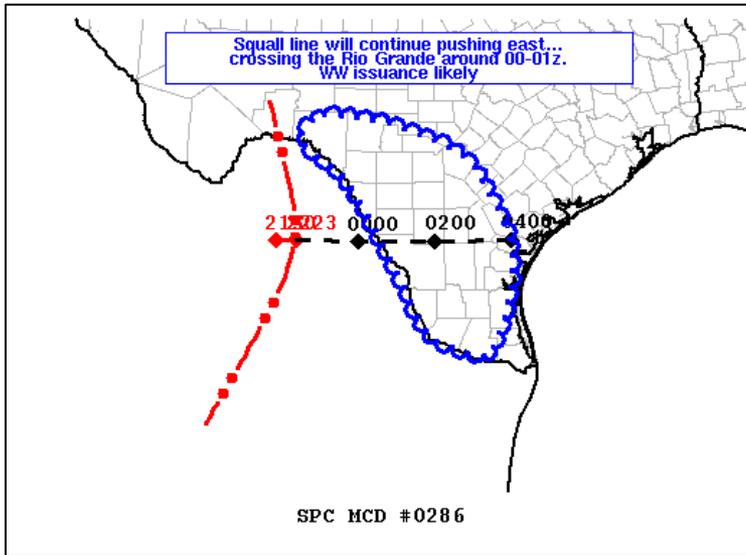

The active weather during the week had several different causes. The severe weather on the 12th and 13th was caused by a trough of low pressure over New Mexico creating lift along the Rio Grande Plains.

A large upper level low pressure system situated over the 4-corners region of the Western U.S. and the upper level Subtropical Jet lead to the Severe Weather on the 17th and 18th. The low pressure was slow to move off to the east. The West Texas dryline also contributed to the storms across our westerns counties each afternoon and evening.

By the 19th, the low pressure had pushed to the east but a surface boundary/weak front was draped across South Central Texas. A few thunderstorms formed across Bastrop, Fayette, and Lavaca Counties as this boundary pushed south. This boundary separated moist air ahead of it and drier air behind it. It helped lift the air to produce the isolated thunderstorms across areas east of Interstate 35.

For more technical explanations check out archived SPC Severe Weather Outlooks (<http://www.spc.noaa.gov/products/outlook/>) and Forecast Discussions from our Office ([AFDEWX](#)).

Flash Flood Watch (1pm 4/17/15 – 1am 4/18/15)

Flash Flood Watch

...For Areas in Green Until 1 AM Saturday...

Greatest threat is where up to 5 inches of rain fell yesterday and an additional 2 to 4 inches of additional rain is possible.

- A Flash Flood Watch means that heavy rainfall may lead to Flash Flooding. *Flash Flooding is a very dangerous situation.*
- Ensure that you have multiple ways to receive warnings (such as radio/TV, NOAA Weather Radio, Smartphone apps, etc.)
- Monitor later forecasts and be prepared to take action should Flash Flood Warnings be issued.
- Remember: **TURN AROUND, DON'T DROWN.**

Radar Update

TIME: 5:00 PM

- Severe storms moving north and east through the Coastal Plains. Rain totals of 1-2 inches expected, with isolated spots up to 5 inches.
- Additional strong storms moving through the Hill Country. Rain totals below 1 inch expected, isolated up to 2 inches.
- Damaging winds and flash flooding are the main threats. A brief tornado is possible.
