A deep fetch of tropical moisture pushed into central California during the late evening of February 3 and spread inland during the morning of February 4 ahead of a strong low pressure center off the Southern California coast. By the time the precipitation had ended by the evening of February 5, much of the Sierra Nevada above 6000 feet had picked up between 1.5 and 3 feet of new snowfall. Moderate to locally heavy rainfall occurred in the San Joaquin Valley, West Side Hills and Sierra as well as across the Kern County Mountains and Deserts where there were several reports of 0.75 to 1.5 inches of rainfall. In addition to the precipitation, strong downslope winds caused considerable damage during on February 4 with several stations reporting gusts exceeding 60 mph. TULARE COUNTY --- 0.2 NNW TULARE AIRPARK [36.15, -119.33], 0.3 NNW TULARE AIRP -119.33], 0.2 NNW TULARE AIRPARK [36.15, -119.33] 02/06/24 04:30 PST 0 Flood (due to Heavy Rain) 02/06/24 04:30 PST n Source: Broadcast Media A truck slid off of SR 99 and crashed into a divider near the exchange with Ave 200. A period of strong wind gusts accompanied the precipitation during the morning of January 19 and the snow level was around 7500 feet for much of the event. Much of the San Joaquin Valley and West Side Hills picked up between a half inch and an inch of rainfall. The Sierra Nevada and adjacent foothills generally picked up between an inch and 2 inches of liquid precipitation with several SNOTELS picking up an estimated 12 to 20 inches of new snowfall. Between a quarter and a half of an inch of rain fell across most of the Tehachapi Mountain range while the Kern County Deserts generally had less than a quarter inch of rainfall. Scattered thunderstorm broke out over the San Joaquin Valley by late morning on January 19 and continued through late afternoon. Several of the thunderstorms produced heavy rainfall and small hail. There were also several reports of roadway flooding in the Visalia area. The precipitation tapered off by late evening. High pressure centered over the Desert Southwest provided for a warm and dry airmass over the area. With plenty of residual low level moisture, light wind and clearing skies, an area of dense fog formed during the morning of February 24 along the SR 99 corridor between Kingsburg and Tulare. The fog impacted travel along SR 99 as well as along SR 198 through Visalia where webcams indicated visibility was below 1000 feet. The fog mixed out by 830 am.
