A supercell thunderstorm produced a tornado during the evening hours of Monday, May 3rd in a rural area of Frederick County, MD, between Mt Pleasant and Libertytown. An estimated 150 trees were uprooted, snapped or damaged along the path of the tornado that moved in an east-northeast direction for approximately three-quarters of a mile.

Tree damage from this tornado began near a residence in the 10800 block of Old Annapolis Road, with a few snapped large branches that fell across Old Annapolis Road. The tornado tracked east-northeast across a large grouping of trees between Old Annapolis Road and Chestnut Grove Road, damaging approximately 90-100 trees with multiple large branches snapped, trees uprooted and trunks snapped in varying directions.

As the tornado crossed Chestnut Grove Road just north of Alton Road, a large amount of tree damage occurred, with an estimated 40-50 trees uprooted in multiple directions while about 20 trees were snapped. Isolated tree damage was noted outside of this path on the southern extent of the tornado path, with a few tree snaps noted. No structural damage was observed anywhere along the tornado path.

As the tornado moved further east-northeast and away from Chestnut Grove Road, it lifted, as no damage was evident or reported along what would have been a continuation of the tornados path. Sporadic, straight-line wind damage was noted further northeast near Libertytown.

FREDERICK COUNTY --- 0.4 NNE LIBERTYTOWN [39.48, -77.25]

After producing a confirmed tornado earlier in Frederick County, Maryland, near Mt. Pleasant, a supercell thunderstorm produced another brief tornado further east shortly after 8:30 P.M. EDT in extreme east-central Frederick County, Maryland, near Unionville.

Damage from this tornado was largely confined to a farm in the 14700 block of Barnes Road that suffered tree and farm equipment damage, and structural damage to large sheds. The tornado initially touched down there as it entered a wooded area, carving a clear path through a section of large trees, with most trees falling in a convergent manner on the southwest side of a farm. Slightly more trees were uprooted than snapped, but both were evident.

As the tornado exited the woods it pushed over a piece of farm equipment and scattered debris across the farm field. As it crossed the center of the farm with the majority of the structures and equipment, substantial damage occurred. Three large farm sheds were severely damaged or destroyed. Farm equipment was moved. Calf hutches were thrown north, northeast into the field. Other sheds were damaged and had debris thrown to the southeast. The tornado lifted as it reached the northeast end of the farm.

Thunderstorm Wind (EG 50 kt)

Source: 911 Call Center

Location Date/Time Deaths & Property & **Event Type and Details** Injuries Crop Dmg A tornado touched down in Ranson West Virginia in the community along Robelei Drive just west of West Virginia Route 115/Mildred Street. The southernmost homes in this community were affected with minor siding and shingle damage. One homeowner with a personal home anemometer measured an unofficial 68mph wind gust. The last two properties, those closest to 115, had the most substantial damage. One outdoor shed was blown from its foundation, and another shed was shifted from its foundation. The trailer section of a tractor trailer was pushed a few feet laterally, and then pushed over onto Route 115. The trailer was being used for storage. Leaf spatter was noted on the homes, and insulation and cardboard was lofted into the power lines along the road. The most substantial damage was from a west wind. However one property had lawn furniture blown in the opposite direction. Several large tree limbs were snapped in differing directions. Two separate residents noted receiving the NWS Tornado Warning over their cell phones before the tornado hit, allowing time to seek safety in their homes. They also reported seeing the tornado moving into the next properties across WV-115. As the storm crossed WV-115, several large branches were snapped off trees in front of Two Crows Antique Mall. While many branches were thrown east, a large one was also thrown to the northwest. The tornado then struck a warehouse at Universal Forest Products and reached peak intensity. On this property it pushed over a large warehouse building that was partially opened along its sides. The main beams of the building were large timbers secured to the ground with bolts. The roof was tin and sections of that roof were carried a half a mile into an adjacent community. People were in the building at the time, but fortunately the only injury was a minor leg abrasion to one person. Another smaller warehouse building was also destroyed. It also caused roof and siding damage to at least two other buildings on this property. The tornado weakened substantially as it traveled east from the warehouses. Debris, but not significant tree damage was noted along Foal Street. Some intermittent damage continued into the new Fairfax Crossing community where some minor siding and shingle damage was noted as well as a few small ornamental trees that were downed. Some final pieces of tin roof were noted here as well The tornado was witnessed to the south by someone in the nearby Potomac Marketplace shopping center as it crossed WV Route 9. From there it passed through mobile home communities along Grayrock Road and Cambridge Drive causing a few large branches to be snapped as well as some roofing damage to at least one mobile home. The tornado lifted before reaching Flowing Acres Road. JEFFERSON COUNTY --- 0.8 NNW DUFFIELDS [39.38, -77.83] 05/03/21 17:30 EST 1K Thunderstorm Wind (EG 50 kt) 05/03/21 17:30 EST 0 Source: 911 Call Center A tree blew down on Whitmer Road at Purdham Lane.
