09/01/21 06:32 EST 0 Flood (due to Heavy Rain) Source: River/Stream Gage 09/01/21 13:46 EST 0

The water level along the Rock Creek in Washington DC rose above flood stage of 7 feet, cresting at 8.04 feet at 11:45 AM EST on the 1st of September. Water reached several portions of the Valley Trail between Picnic Areas 7 and 10 in Rock Creek Park.

The remnants of Ida produced instances of flooding and flash flooding across the area. Tropical moisture infiltrated the area and there were moderate amounts of instability as well. This combined with the lift provided from the remnants of Ida led to heavy rainfall during this time. Rainfall amounts averaged around 1-3".

DISTRICT OF COLUMBIA COUNTY --- 0.5 N LINCOLN MEMORIAL [38.89, -77.05], 0.5 E LINCOLN MEMORIAL [38.88, -77.04], 0.4 N US CAPITOL [38.89, -77.02], 0.8 N US CAPITOL [38.89, -77.02], 0.8 N LINCOLN MEMORIAL [38.89, -77.05], 0.9 NNW LINCOLN MEMORIAL [38.89, -77.06]

The water level along the Rock Creek in Washington DC rose above flood stage of 7 feet, cresting at 7.33 feet at 7:45 AM EST on the 23rd of September. Water reached several portions of the Valley Trail between Picnic Areas 7 and 10 in Rock Creek Park.

A slow moving cold front approached the area on the 22nd before passing through on the 23rd. A deep southerly flow allowed for tropical moisture to move into the area ahead of the boundary. This led to heavy rainfall as the cold front approached, and several instances of flooding along with isolated instances of flash flooding occurred.

		Injuries	Crop Dmg	

The remnants of Ida produced one of the strongest tornadoes in the past decade of Maryland's history. Only four other EF2 or stronger tornadoes have occurred in the state in the past 10 years.

On Wednesday afternoon, a tornado that peaked in intensity with winds estimated at 125 mph traveled northeast along a path through Anne Arundel County and the City of Annapolis. It not only snapped numerous trees, but also produced significant structural damage to homes, businesses, and a school. Fortunately, there were no injuries reported, even though it tracked through a heavily populated area. Several eyewitnesses to the event reported getting the NWS Tornado Warning through their cell phone in advance, and sheltering in response to the warning.

From the NWS storm survey, the first damage noted, and recorded touchdown point was in Owensville, Maryland, in southern Anne Arundel County, near the intersection of Sudley Road and Owensville Road. This included a large limb from a tree top over Sudley Road and several portions of large cedar trees snapped along Owensville Road. The tornado moved northeast across rural southern Anne Arundel County before crossing Mill Swamp Road. Here, about a quarter of a mile east of the intersection with Dove Farm Road, dozens of trees and large branches were snapped and uprooted in a path from southwest to northeast as far as you could see in either direction from the road. While the dominant direction of the tree damage was being blown down to the north or northeast, there were trees downed in multiple directions, and many were topped.

The tornado intensified further as it moved into the South River Colony community. Dozens of trees were downed along the easternmost portions of Monarch Drive. Homes near the intersection of Monarch Drive and Red Admiral Court were particularly hard hit by some of the strongest winds of the entire tornado path. Several had significant portions of their roof damaged or removed, and one home in the middle of the track was unroofed entirely. One resident in this area reported seeing the tornado as it approached. The tornado then crossed South River Golf Links before moving into a campus of school buildings that includes South River High School and the Center of Applied Technology South. There it damaged the upper parts of the football field grandstands and concessions stand, damaged the roof, and caused cosmetic damage to some of the upper portions of the Center of Applied Technology South. The schools were left structurally sound, and the staff and some students that were there were able to shelter without injury.

The tornado crossed Central Avenue around 2:11 PM and moved into Edgewater. Here it crossed the communities of Woodland Beach, Londontowne, and Edgewater Park. Dozens of trees and large branches were snapped, and portions of 5 to 10 roofs were noted to have been damaged. One home near the intersection of Millstone Drive and Oakwood Road had only damaged roof trusses remaining of its roof.

The tornado crossed the South River and moved through western portions of the City of Annapolis at peak intensity with winds estimated at 125 mph at 2:20 PM. Several trees were snapped along the path as it crossed Aris T. Allen Boulevard just east of the Annapolis Harbour Center shopping area. It crossed Forest Drive at the intersection of Parole Street. Several homes there sustained roof damage, and one home was unroofed entirely. As it crossed the area near the intersection of West Street and Lee Street, the most substantial structural damage was noted. A large warehouse building had the winds enter the south side of the building and blow out a large portion of the west side cinder block wall. The roof with large metal trusses was largely removed. A fast food restaurant had its sign entirely removed from its post. Another commercial building had its roof removed, significant upper portions of the cinder block building removed, and its large commercial sign post blown over. A strip mall across the street had its windows blown out and flat roof damaged. All the telephone poles and attached wires along this stretch of West Street were downed. Another commercial building had its windows blown out. Several eyewitnesses saw the tornado as it passed.

Additional residential roof damage occurred as the tornado moved north over Bowman Court. From here, the tornado crossed into the community of Admiral Heights. Affected were areas along Halsey Road and adjacent Cedar Park Road. Here, the wind did not directly cause any structural damage, but about a dozen trees were snapped. That included one large, healthy tree about two and a half feet in diameter. The tornado crossed Weems Creek and Rowe Boulevard, and then snapped several trees along Riverview Avenue.

Finally, the tornado crossed US Route 50/301 a few hundred yards west of the Severn River Bridge, snapping trees on both sides of the highway. The final damage noted occurred at the end of Acorn Drive at the last residential property that sits on the shore of the Severn River. Several trees were snapped here. The tornado dissipated here, or as it crossed the Severn River. The survey team was not able to find any damage north of the Severn River, and video evidence from social media indicates the funnel dissipated here.

Deaths &

Date/Time

Trees blew down on southbound George Washington Memorial Parkway near Spout Run Parkway.

Location

Injuries Crop Dma Pack Horse Rd. was closed due to flooding along Little Mountain Run between Brush Creek Rd. and Shockeysville Rd. The remnants of Ida produced widespread flooding along with instances of flash flooding across the area. Tropical moisture infiltrated the area and there were moderate amounts of instability as well. This combined with the lift provided from the remnants of Ida led to heavy rainfall during this time. Rainfall amounts averaged around 1-3" near and east of Interstate 95, with amounts around 2 to 5 inches across portions of northern Virginia. ORANGE COUNTY --- 1.4 NNE EVERONA [38.32, -77.96] 09/01/21 01:08 EST 1K Thunderstorm Wind (EG 50 kt) 09/01/21 01:08 EST 0 Source: 911 Call Center A tree blew down near the intersection of US-522 Zachary Taylor Highway and VA-617 Pine Stake Road/Everona Road. Rockslide/mudslide closed Chestnut Hill Road near US Route 340.

The remnants of Ida produced widespread flooding along with instances of flash flooding across the area. Tropical moisture infiltrated the area and there were moderate amounts of instability as well. This combined with the lift provided from the remnants of Ida led to heavy rainfall during this time. Rainfall amounts averaged 4 to 8 inches. Excess runoff from the rainfall led to river flooding as well.

 Source: River/Stream Gage

The water level rose above flood stage, cresting at 10.92 feet at 9:45 PM EST on the 23rd of September. Floodwaters covered Douglas Grove Road east of Martinsburg. A portion of Bowers Road was also flooded. Low lying areas near the creek were flooded, and water covered the stream access point to the Van Metre Ford Pedestrian Bridge.

A slow moving cold front approached the area on the 22nd before passing through on the 23rd. A deep southerly flow allowed for tropical moisture to move into the area ahead of the boundary. This led to heavy rainfall as the cold front approached which caused instances of flooding.
