# Summary of Impacts

Links: See/submit [Condition Monitoring Observer Reports \(CMOR\)](#) and view the [Drought Impacts Reporter](#)

## Hydrologic Impacts

- Stream flows have been low

## Agricultural Impacts

- There are no known impacts at this time

## Fire Hazard Impacts

- Tennessee Forestry reported a small increase in small fires across the area.

## Other Impacts

- Stay tuned for future updates as drought is likely to worsen in many areas

## Mitigation Actions

- Please refer to your municipality and/or water provider for mitigation information

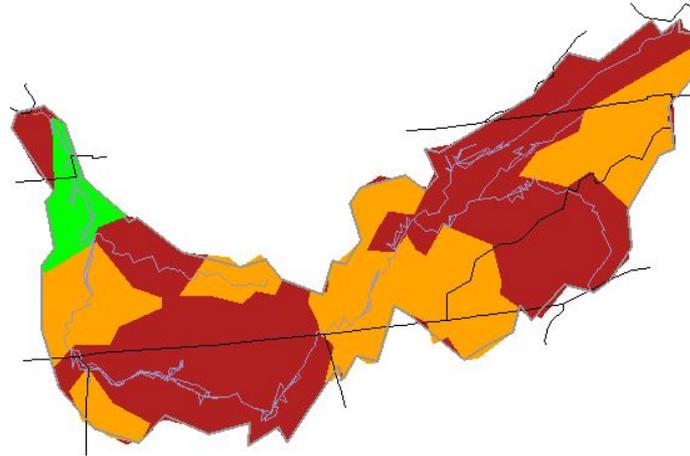

# Hydrologic Conditions and Impacts

- Streamflows have been below normal to much below normal.

Wednesday, October 04, 2023

GS

Explanation - Percentile classes							
Low	<10	10-24	25-75	76-90	>90	High	No Data
	Much below normal	Below normal	Normal	Above normal	Much above normal		

Image Caption: USGS 7 day average streamflow HUC map valid 10/4/2023

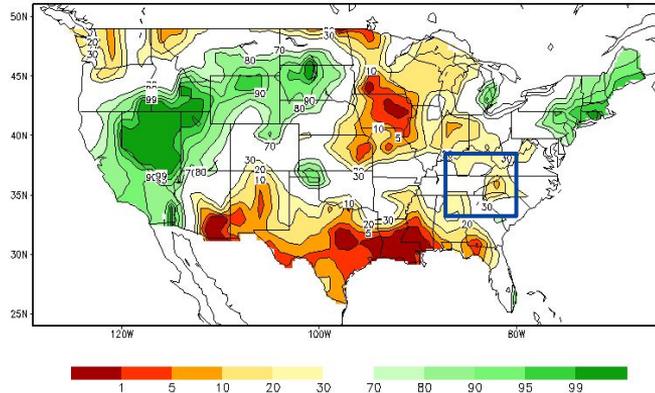

# Agricultural Impacts

- Most of the conditions are near normal.

Valid October 2023

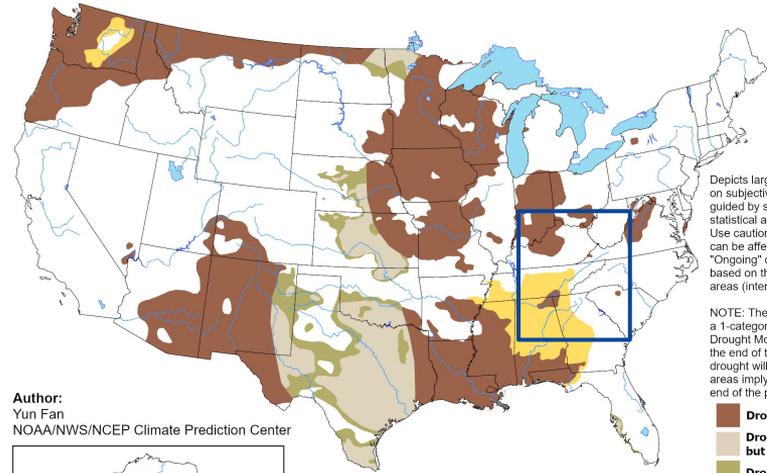

# Drought Outlook

The latest monthly and seasonal outlooks can be found on the [CPC homepage](#)

- Drought development is likely for much of East Tennessee.

## U.S. Monthly Drought Outlook Drought Tendency During the Valid Period

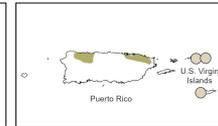

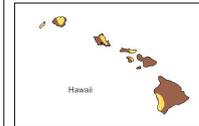

Valid for October 2023  
Released September 30, 2023

Depicts large-scale trends based on subjectively derived probabilities guided by short- and long-range statistical and dynamical forecasts. Use caution for applications that can be affected by short lived events. \*Ongoing\* drought areas are based on the U.S. Drought Monitor areas (intensities of D1 to D4).

NOTE: The tan areas imply at least a 1-category improvement in the Drought Monitor intensity levels by the end of the period, although drought will remain. The green areas imply drought removal by the end of the period (D0 or none).

Author:  
Yun Fan  
NOAA/NWS/NCEP Climate Prediction Center

- Drought persists
- Drought remains, but improves
- Drought removal likely
- Drought development likely
- No drought
