## MAXIMUM STATION PRECIPITATION FOR 1, 2, 3, 6, 12, and 24 HOURS

### PART XXV: ARKANSAS

This report which is one of a planned series covering the entire United States, was prompted by the long-standing and widespread interest in maximum observed precipitation amounts for durations of 24 hours and under. At least two summaries of this type of data have already been prepared<sup>1</sup>. Neither summary involved more than a couple of hundred stations throughout the United States, and no attempt was made to determine the month-to-month variation of the maximum values. Eventually, the records for some 3000 recording gages in the United States will have been examined for maximum amounts. The survey for the eastern half of the country is being conducted by the Hydro-meteorological Section in cooperation with the Corps of Engineers and that for the western half by the Cooperative Studies Section in cooperation with the Bureau of Reclamation. Sources of data are: (1) Hydrologic Bulletin, (2) Climatological Data, (3) WB Form 1017, triple-register sheet, (4) WB Form 1030, Monthly Climatological Summary, (5) Tables of Excessive Precipitation from the Report of the Chief of the Weather Bureau, (6) Bulletin W for 1930, and (7) Original Climatological Records.

All precipitation amounts presented in the tabulations are in inches.

The station names and locations shown on figures 1-6 are those listed in Climatological Data for December 1950, together with others having five years or more of record, though not operative in 1950. Some stations have operated under two or more names and/or at several local sites during the period of record. Any important change in location usually calls for a new station name so that records for the two sites are automatically tabulated separately.

The period of record, except at Weather Bureau first-order stations, is limited to the 11 years

1. Yarnell, D. L., "Rainfall Intensity-Frequency Data," U. S. Department of Agriculture Miscellaneous Publication No. 204, August 1935.
- Shands, A. L. and D. Ammerman, "Maximum Recorded United States Point Rainfall," Weather Bureau Technical Paper No. 2, April 1947.

since the hydrologic network of weighing gages was inaugurated in 1940. In the case of the Weather Bureau first-order stations, tipping-bucket gage records were surveyed for the entire period of record prior to 1951. For comparative purposes, two sets of maxima were obtained from these long records, one for the period 1940-1950 and the other for the period from the installation of the tipping-bucket gage through 1950. Records for stations in operation less than 5 years were not used unless the stations were active through 1950, in which case their maxima are listed to facilitate future surveys of subsequent data. If the period of record was not continuous and any single interruption was less than one year, the notation "break(s)" is inserted after the years denoting the period of record. Interruptions of one year or longer are shown by separate listing of the years, e.g., 1940-1942, 1943-1950, indicating that a break of 12 months or longer occurred in 1942-1943.

If the maximum occurred on the last day of the month and the first day of the next month, the same maximum applies for each of the months involved. When this occurs underlining of the dates involved indicates that the recorded period of rainfall began on the last day of the preceding month and ended on the first day of the month listed, whereas when such dates are not underlined, the recorded period of rainfall began on the last day of the month listed and ended on the first day of the following month.

The time intervals used in most of the survey and tabulations began on the hour. This practice yields lower values than would be obtained by allowing the interval to begin any time within an hour, but the extra work involved in obtaining the true values would greatly increase the cost of the project. In instances where true maxima were available the amounts were published and designated as follows: (v) Bulletin W for 1930. (w) True maxima from Table of Excessive Precipitation of the Report of the Chief of the Weather Bureau. (x) True maxima from WB 1030, Monthly Climatological Summary, or from Technical Paper No. 2, Maximum Recorded Point Rainfall in the United States. (y) Original Climatological Records.

Estimates of maximum amounts, indicated by the letter "E" in the tabulations, were required whenever a recording gage was not functioning because of mechanical or electrical failure or because the precipitation was in the form of snow (tipping-bucket gages cannot measure snowfall rates). In such cases, the precipitation was assumed to have been evenly distributed throughout the period and estimates were obtained by prorating the accumulation. For example, in one case an amount of 5.00 inches was accumulated through a period of 54 hours. It developed that 24/54 of this amount, or 2.22 inches, was higher than any other amount for 24 hours, and this was used as the maximum.

Since this survey was confined to the period covered by recording gages, the 24-hour maximum amounts listed may be exceeded by 24-hour maxima published in reports<sup>2</sup> of other surveys

2. U. S. Weather Bureau, "Maximum 24-Hour Precipitation in the United States," Technical Paper No. 16, Washington, 1951.

supplementing the recording gage data with antecedent nonrecording-gage records. Although it would have been an easy matter to use these higher maxima, it was believed preferable to list maxima for all durations for the same period of record.

Table 1 shows the highest recorded value for each month and table 2 gives the highest for any month, for each of the durations, 1, 2, 3, 6, 12 and 14 hours.

The monthly distribution of occurrences of the maximum amounts at the 64 stations with five or more years of record are shown in table 3.

Data were compiled by members of the Meteorological Aid Pool of the Hydrometeorological Section. Final checking and preparation for publication were done in the Hydrometeorological Section by Callie Rhodes, Cora Ludwig, and Edna Grooms under the supervision of W. W. Swayne. The manuscript was typed and checked by Cora Ludwig and Edna Grooms.
